

Voice-Insight provides workers and consumers natural language interaction with their information systems and devices. Its voice recognition solutions deliver unparalleled gains in productivity and performance with easy integration into existing applications in the fields of warehouse logistics, GIS, inspections, quality control, vehicle navigation and audio & video on demand. They are compatible with most hardware devices, providing integrated voice control of GPS, barcode, RFID and other data capture devices.

Voice-Insight

Voice-Insight, a software company founded in Belgium in 1999, has developed a set of patented technologies that can be used to easily **Voice Enable** any database application.

Today, Voice-Insight, and its Partners address numerous application market segments including: Warehousing & Logistics; Geographic Information Systems; Asset Inspections & Maintenance; e-Car and e-Home, and more. These voice applications activate many kinds of devices & sensors: desktop / tablet / wearable PCs, PDA's, Smartphones, Portable Navigation Devices, IRC's, barcode scanners, RFID, GPS, cameras, and more.

Transport & Logistics: Voice-activated hardware & applications for trucks and private cars allow the user to concentrate on the road. Such applications span and integrate: GPS, GPRS-based mail, on-board "Fleet Management" software, contacts databases, multimedia (radio, CD, DVD ...) and the like.

The logistics solutions provide voice activated procedures for goods receiving, inventory, order selection, returned goods processing, goods/mail sorting, etc. They deliver a hands-free & eyes-free work environment for the ultimate in productivity, accuracy and safety.

GIS & GPS: Our technology allows Business Partners in the field of Geomatics to voice enable the gathering, storing, processing, and delivering of geographic information, or spatially referenced information. This technology has been successfully applied to LPIS (*Land Parcel Information Systems*), Road Map environments, Asset Management (*Building, furniture etc.*), and others.

One of our premier Partners, Magellan Navigation, has already deployed over 1.000.000 of our licenses for their voice-activated personal navigation devices (*consumer products*).

Inspection & Maintenance Voice guided inspection procedures contribute productivity and accuracy benefits in asset inspections where mobility is key (*e.g. field walks survey - driving or walking*) and security can be a major concern (*e.g. industrial maintenance of electrical masts*).

Together with our Business Partners we have deployed a series of applications ranging from fleet management (vehicle inspection), to utilities maintenance (*electricity, gas and sewage networks*) to roads and waterways, real estate infrastructure and building management.

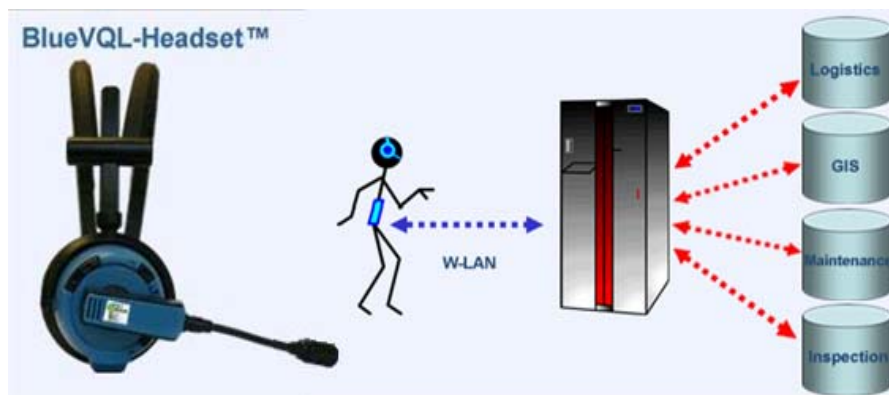

e-Car & e-Home Voice-Insight solutions extend local database access via Web Services as part of the e-Car concept (GPS-PND-Web, GPRS-based e-mail, radio/CD/DVD, the can-bus of the car ...) and voice-activated Remote Control (vocal interface to a combination of TV, EPG, security camera network ...)

Voice-Insight's unique approach to the market is based on a combination of factors:

- ✓ **No voice training/Speaker Independent Systems:**
New users and temporary workers are up & running in minutes.
- ✓ **Virtually Unlimited Vocabulary:**
All system commands and the entire content of the database are automatically available using natural phrases in the user's language.
- ✓ **Multilingual Support:**
Switch between many languages in the middle of any application (field working in shifts).
- ✓ **User-friendly Software Development Kit (SDK):**
An efficient tool for Business Partners to develop vocal interfaces for their applications. whatever the field or domain (*Logistics, Transport, Maintenance, Quality Control, Inspection ...*).
- ✓ **Highest Level of Text-To-Speech quality:**
The most pleasing, efficient and natural instructions / response from any given device.
- ✓ **Specialized Hardware Options and Know-how:**
High performance, industrial strength, long range wireless headsets and embedded voice systems as well as the design know-how to optimize devices for the target application.

In 2006, Voice-Insight launched its partnership and interoperability program called the **BlueVQL™-Ecosystem** as a way to further federate Business Partners in different market segments.
