Labor Management

Voice user interfacing is a proven technique for increasing productivity and accuracy in material handling operations. Now, a new product from Voice Insight, the **Mobile Speech Client**, brings the benefits of voice to a wider spectrum of material handling applications – from warehousing and returns to manufacturing and field service – at a fraction of the cost of traditional voice systems and with implementation times in days instead of months.

Voice-Insight's Mobile Speech Client for Oracle WMS

The Mobile Speech Client automatically voice-enables existing warehouse management systems through common RF terminal interfaces. Simply by installing it on the mobile device, menus, data entry forms and functions come under intuitive voice control while preserving existing usage modes like touch screens, keyboards, barcode scanners and other connected data capture devices and peripherals.

Fast Implementation and Payback

Do away with the complexity, delays and cost of implementing dedicated voice task management servers, their inflexible middleware interfaces to your WMS, and pricey dedicated voice terminals. Such projects often last 3 to 8 months and can top hundreds of thousands of dollars in services, servers, terminals, IT training, etc. If you can set up for RF picking using Oracle WMS, a few days installation and a unit software license may be all you need to start voice-picking. Now that's a true breakthrough in speech enabled warehousing!

Take Advantage of the Latest Voice and Mobile Technologies

The Mobile Speech Client is a product of Voice-Insight's deep knowledge of natural speech interpretation techniques on mobile devices and its application experience across industries, geographies, languages. Our voice-specialist approach creates high performance solutions that magnify the benefits of voice in any material handling application.

- **Improve productivity** through hands and eyes free system access without the delays and distraction of inconvenient and confusing paper lists and mobile computer screens, keyboards, and the like.
- **Maximize accuracy** by removing error prone paper, blurry screens and clumsy keyboards. Use voice only or integrate barcode scanning for more confirmation options (locations, items, etc).
- **Reduce training time**; no voice training is required in any language and job procedure training is drastically reduced with intuitive dialogs and on-demand help for exceptions handling.
- **Start fast** by using the voice client "off the shelf" to voice enable existing RF picking processes. Move from paper to voice with existing Oracle WMS task management and mobility capabilities.
- **Streamline your work** flows with voice macros and shortcuts for jumping immediately to assigned tasks and simplify user interaction (e.g. eliminate UoM code memorization and quantity calculations).
- **Automatically benefit** from future enhancements to your WMS. The voice client adapts to new forms, functions, and tasks as they are made accessible to the mobile device. Synchronous processing means your inventory and fulfillment data are real time.
- **Use popular mobile devices** from Motorola and LXE for integrated voice control over scanning, RFID and other data capture capabilities. The voice client doesn't interfere; use your non-voice processes whenever you like on the same device.
- **Step up productivity** with the latest in wireless headsets and scanners and a new generation of XP based voice terminals mounted on fork lifts, carts, etc., and eliminate costly device handling and administration, battery replacements and charging accessories.

ABOUT VOICE-INSIGHT

Voice-Insight delivers voice enabled logistics solutions of unparalleled flexibility and performance in mobile environments where users require intuitive, hands and eyes free interaction with applications. Corporations and consumers around the world use our products in warehousing, asset inspections, navigation and infotainment, geographic information systems, and consumer entertainment. Voice Insight has offices in Belgium, United States, United Kingdom, Germany, Netherlands and a worldwide distribution network.
