

**FOR IMMEDIATE RELEASE**

**Voice-Insight Announces  
Voice Mobility Solutions Based on Oracle® Applications**

**Collaborate 08 – Oracle Applications User Group Conference** –Voice-Insight, Inc., a leading provider of Speech Recognition solutions for mobile enterprise applications, today announced the availability of advanced voice interface solutions that leverage Oracle's mobility platform for Oracle® Warehouse Management and Oracle Mobile Supply Chain Applications.

A member of the Oracle Partner Network, Voice-Insight will adapt its advanced voice interface technologies to create natural language, voice interaction capability across a range of Oracle mobile enterprise applications.

The combination of Voice-Insight and Oracle products are addressing the issues that have limited the market acceptance of voice solutions in supply chain applications. Though a proven method for increasing productivity and accuracy in material handling operations, conventional voice solutions have proven complex and costly to deploy and maintain, limiting their deployment potential. Through its universal voice interpreter solution for the Oracle Mobile Client running on multimodal, mobile devices, Voice Insight provides a breakthrough approach, suitable for low or variable volume situations and flexible work, with an unprecedented level of deployment simplicity and flexibility. Additionally, the parties will offer solutions for higher transactional volume environments like order selection in small to large warehouses.

“With this combined solution, Oracle customers now have the option of easily deployable voice enabled applications over Oracle mobile services infrastructure,” said Jennifer Sherman, Senior Director of Logistics Product Strategy at Oracle. “This is a true breakthrough that opens the door for voice, as a valuable process improvement technique, to be used over the Oracle E-Business Suite - from warehousing and supply chain to manufacturing and asset management.”

This solution benefits from the unique capabilities of Voice-Insight's VQL software: mobile device compatibility with Windows XP terminals and “voice-ready” Windows Mobile terminals (from Motorola, LXE, and others); integrated voice control of data capture devices (barcode scanners, RFID readers, cameras, etc.) or output devices (label printers); Long range wireless headsets that allow the voice-terminal to be fixed in place or mounted on a vehicle to eliminate the need for the mobile RF terminal itself; and, speaker independent operation (no voice training required) with virtually unlimited vocabulary to support any work flow and process training dialog.

Oracle's suite of warehousing and supply chain applications enable companies to maximize their utilization of labor, space and equipment investments by coordinating and optimizing resource usage and material flows across a global supply chain on a single platform. The new voice solutions from Voice-Insight will initially address Oracle modules for inbound, outbound and reverse logistics and finished, raw and work-in-process materials for manufacturing.

“With Oracle's world class mobility platform and vast customer base we have a perfect opportunity to bring the benefits of voice to many customers who, until now, found voice

too complex or expensive to implement” said Charles Kemper, CEO of Voice-Insight. “This alliance validates our approach to designing voice solutions and creates some of the highest return IT investment options for customers in supply chain operations today.”

**About COLLABORATE 08:** COLLABORATE 08 is the Technology and Applications Forum for the Oracle Community hosted by the Independent Oracle Users Group (IOUG), the Oracle Applications Users Group (OAUG) and Quest International Users Group (Quest), to be held April 13-17, 2008 in Denver, Colorado. COLLABORATE 08 is designed to help users of the full family of Oracle business applications and database technologies gain greater value from their Oracle investments. Created by and for users, COLLABORATE 08 offers an expert blend of customer- to-customer interaction and insights from technology visionaries and Oracle strategists.

#### **About Voice-Insight**

Voice-Insight delivers voice recognition solutions of unparalleled flexibility and performance in mobile environments that require hands and eyes free interaction with enterprise or consumer applications. It's products are used by corporations and consumers around the world in warehousing, asset inspections, navigation and infotainment, geographic information systems, and consumer entertainment. Voice Insight is headquartered in Brussels, Belgium with offices in the USA, Germany and Netherlands and has a development partners and distributor network serving these and many other geographies. Visit Voice-Insight at booth 1365 at COLLABORATE 08, or, at <http://www.voice-insight.com>

#### **About the Oracle PartnerNetwork**

Oracle PartnerNetwork is a global business network of more than 19,500 companies that deliver innovative software solutions based on Oracle software. Through access to Oracle's premier products, education, technical services, marketing and sales support, the Oracle PartnerNetwork program provides partners with the resources they need to be successful in today's global economy. Oracle partners are able to offer their customers leading-edge solutions backed by Oracle's position as the world's largest enterprise software company. Partners who are able to demonstrate superior product knowledge, technical expertise and a commitment to doing business with Oracle qualify for the Certified Partner levels. <http://oraclepartnernetwork.oracle.com/>.
